(54) Title: DISPENSING DEVICE

(57) Abstract: This invention relates to a substance dispensing device (1) having a body (2) that defines a chamber (3) for receiving a substance capsule (4). The capsule (4) is operable to dispense substance therefrom and has an outlet (20) through which substance is dispensed. The body has two relatively movable parts (6, 7) that are moved relatively apart from a rest position to condition the device (1) for use. A closure member (23) associated with the movable part (7) obstructs the outlet (20) when the movable parts are in the rest position.
